	Examiner Steve R. Crow	Art Unit 3764	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claim 1 is rejected under 35 U.S.C. 103(a) as being unpatentable over Kuo in view of Piaget et al (539).

Kuo discloses a dual mode exercise device having treadmill action mode and stepping mode, wherein a switch member 37 is pivotally connected to a generally U-shaped frame 38 and is positioned at a horizontal position when the pedals are used in the stair climbing mode, and is inclined upwards into engagement with apertures 34 when the pedals are used as a treadmill. Kuo does not disclose spring means for urging the switch member towards an inclined position.

In general, Piaget et al discloses a treadmill having dual spring loaded treads wherein springs 16 urge bars 36R upwards; and further discloses U-shaped flanges 48. Given these teachings, it would have been obvious to one skilled in the art to provide the Kuo device with a spring connected between the underside of the switch member and the frame for urging the switch member upwards for semi-automation of the switch mechanism; and to connect the

spring member to the frame via a U-shaped flange as taught by Piaget et al for greater stability.

Conclusion

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Allowable Subject Matter

4. Claims 2-4 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
